

### **Important note for Coordinator or Teacher:**

This quarter speaks about something very important in our day – the fight young children have with hearing in schools that God does not exist, the big bang theory as truth, and the idea that evolution is fact. If at all possible, it is best to split your class with Grades 1-4 in one and Grades 5-6 in another so that you can handle the more deeper things that Grade 5-6 students can discuss and be more effective in refuting the false teachings they will meet in school, with friends, with teachers, and the world.

If you can't please then hand out the booklets that are meant for the Grade 5-6 students (or any mature, able reader that is Grade 4 as well) They can take these booklets home so they can have a deeper understanding. The whole class will do a similar, simpler lesson that will teach the basics of proving the Bible, but won't be as deep.

Thank you for your dedication to teaching the truth!
